## LAB2 - DHCP4+Relay

- Aufgabenstellung**

### Packet Tracer - Configuring DHCP Using Cisco IOS

Ziel dieser Aufgabe ist es, einen Cisco-Router als DHCP-Server zu konfigurieren, DHCP-Relay einzurichten und die DHCP-Funktionalität durch verschiedene Tests zu überprüfen.

- Durchführungsbeschreibung (Arbeitsschritte)**

## Teil 1: Konfigurieren eines Routers als DHCP-Server

### Schritt 1: Konfigurieren der ausgeschlossenen IPv4-Adressen

1. Den CLI-Modus des Routers R2 aufrufen.
2. Die folgenden Befehle eingeben, um die ersten 10 Adressen aus den R1- und R3-LANs auszuschließen:

```
R2
Physical  Config  CLI  Attributes
IOS Command Line Interface
Press RETURN to get started:

%LINEPROTO-5-UPDOWN: Line protocol on Interface GigabitEthernet0/0, changed state to up
%LINK-5-CHANGED: Interface Serial0/0/0, changed state to up
%LINK-5-CHANGED: Interface Serial0/0/1, changed state to up
%LINEPROTO-5-UPDOWN: Line protocol on Interface Serial0/0/1, changed state to up
%LINEPROTO-5-UPDOWN: Line protocol on Interface Serial0/0/0, changed state to up
%DUAL-5-NBRCHANGE: IP-EIGRP 1: Neighbor 10.2.2.1 (Serial0/0/1) is up: new adjacency
%DUAL-5-NBRCHANGE: IP-EIGRP 1: Neighbor 10.1.1.1 (Serial0/0/0) is up: new adjacency

R2>
R2>enable
R2#configure terminal
Enter configuration commands, one per line. End with CNTRL/Z.
R2(config)#ip dhcp excluded-address 192.168.10.1 192.168.10.10
R2(config)#ip dhcp excluded-address 192.168.30.1 192.168.30.10
R2(config)#
```

## Schritt 2: Erstellen eines DHCP-Pools für das R1-LAN

1. Einen DHCP-Pool mit dem Namen R1-LAN erstellen:

```
R2
R2(config)#
R2(config)#
R2(config)#
R2(config)#
R2(config)#ip dhcp pool R1-LAN
R2(dhcp-config)#network 192.168.10.0 255.255.255.0
R2(dhcp-config)#default-router 192.168.10.1
R2(dhcp-config)#dns-server 192.168.20.254
R2(dhcp-config)#
```

## Schritt 3: Erstellen eines DHCP-Pools für das R3-LAN

1. Einen weiteren DHCP-Pool mit dem Namen R3-LAN erstellen:

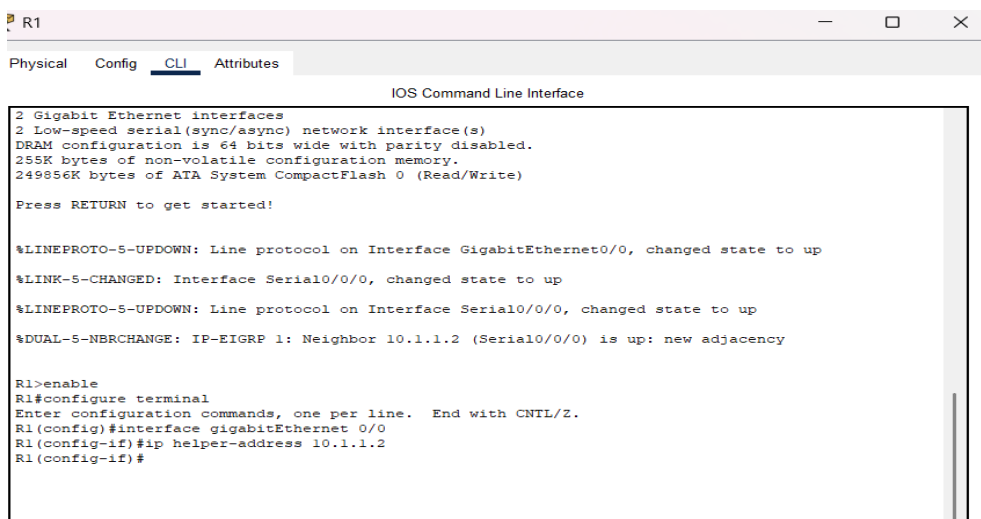

```
R2
R2(config)#
R2(config)#
R2(config)#
R2(config)#
R2(config)#ip dhcp pool R3-LAN
R2(dhcp-config)#network 192.168.30.0 255.255.255.0
R2(dhcp-config)#default-router 192.168.30.1
R2(dhcp-config)#dns-server 192.168.20.254
R2(dhcp-config)#
```

## Teil 2: Konfigurieren des DHCP-Relay

### Schritt 1: Konfigurieren von R1 und R3 als DHCP-Relay-Agenten

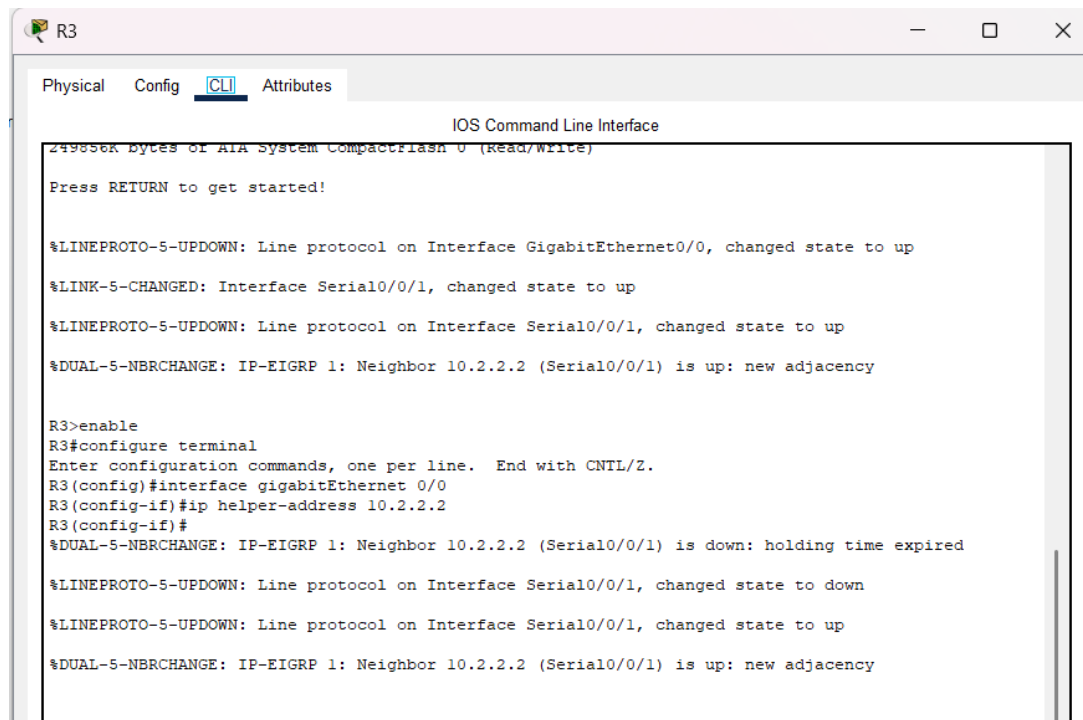

1. Auf R1 und R3 in die Konfiguration der Schnittstelle GigabitEthernet0/0 wechseln:

```
R1
Physical Config CLI Attributes
IOS Command Line Interface
2 Gigabit Ethernet interfaces
2 Low-speed serial(sync/async) network interface(s)
DRAM configuration is 64 bits wide with parity disabled.
255K bytes of non-volatile configuration memory.
249856K bytes of ATA System CompactFlash 0 (Read/Write)
Press RETURN to get started!

%LINEPROTO-5-UPDOWN: Line protocol on Interface GigabitEthernet0/0, changed state to up
%LINK-5-CHANGED: Interface Serial0/0/0, changed state to up
%LINEPROTO-5-UPDOWN: Line protocol on Interface Serial0/0/0, changed state to up
%DUAL-5-NBRCHANGE: IP-EIGRP 1: Neighbor 10.1.1.2 (Serial0/0/0) is up: new adjacency

R1>enable
R1#configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
R1(config)#interface gigabitEthernet 0/0
R1(config-if)#ip helper-address 10.1.1.2
R1(config-if)#
```

### Teil 3: Konfigurieren von R2 als DHCP-Client

1. Schnittstelle GigabitEthernet0/1 von R2 auf DHCP setzen:
2. Überprüfung, ob R2 eine IP-Adresse erhalten hat:

## Teil 4: Überprüfung von DHCP und Konnektivität

### Schritt 1: Überprüfung der DHCP-Bindungen

1. Auf R2 überprüfen, welche IP-Adressen über DHCP vergeben wurden:

### Schritt 2: Überprüfung der Konnektivität

1. Auf PC1 und PC2 sicherstellen, dass sie auf DHCP eingestellt sind.
2. Falls nötig, erneuern der DHCP-Lease auf PC1 und PC2.
3. Überprüfen, ob PC1 und PC2 sich gegenseitig anpingen können:

```

## Überprüfung der IP-Konfiguration auf den Clients (PC1 und PC2)

The screenshot shows the Command Prompt window for PC1 in Cisco Packet Tracer. The window title is 'PC1'. The tabs are 'Physical', 'Config', 'Desktop', 'Programming', and 'Attributes'. The 'Desktop' tab is selected. The Command Prompt shows the output of the 'ipconfig /all' command. The output displays the configuration for the FastEthernet0 and Bluetooth connections. The FastEthernet0 connection is the default port and shows the following details: Connection-specific DNS Suffix is empty, Physical Address is 0002.4AA5.1470, Link-local IPv6 Address is FE80::202:4AFF:FEA5:1470, IPv6 Address is empty, IPv4 Address is 192.168.10.11, Subnet Mask is 255.255.255.0, Default Gateway is empty, DHCP Servers is 192.168.10.1, DHCPv6 IAID is 10.1.1.2, DHCPv6 Client DUID is 00-01-00-01-0C-3C-16-CE-00-02-4A-A5-14-70, DNS Servers is empty, and the DNS Server IP is 192.168.20.254. The Bluetooth connection shows: Connection-specific DNS Suffix is empty, Physical Address is 000D.BDB9.B1A9, Link-local IPv6 Address is empty, IPv6 Address is empty, IPv4 Address is 0.0.0.0, Subnet Mask is 0.0.0.0, Default Gateway is empty, DHCP Servers is 0.0.0.0, DHCPv6 IAID is empty, DHCPv6 Client DUID is 00-01-00-01-0C-3C-16-CE-00-02-4A-A5-14-70, DNS Servers is empty, and the DNS Server IP is 192.168.20.254.

```
